

## Conservation Status of South Australia's Breeding Seabirds Oceanic Migrants

### Short-tailed Shearwater *Puffinus tenuirostris*

Distribution (note log scale):

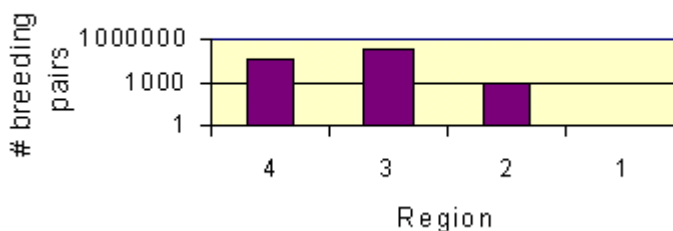

- Range:** In South Australia, Short-tailed Shearwaters are primarily found off the west coast of Eyre Peninsula.
- Migratory behaviour:** Fully migratory species. Travel primarily to the west coast of North America in April and return in a south-westerly direction through the central Pacific in September.
- Diet:** Consume primarily fish, cephalopods and krill.

### White-faced Storm-Petrel *Pelagodroma marina*

Distribution (note log scale):

- Range:** Commonly found around the lower parts of Eyre Peninsula, especially southern Spencer Gulf. Large breeding colonies occur on islands off the west coast of the Eyre Peninsula, in lower Spencer Gulf and also on Nobby Island off Kangaroo Island.
- Migratory behaviour:** Migrate from temperate breeding sites in February to feeding grounds in tropical and subtropical waters, returning in August.
- Diet:** Pelagic crustaceans, small fish and other small surface plankton
