

Baseline Monitoring Schedule: 2017 Groundwater

The schedule for groundwater site visits is outlined below. Coloured cells represent when monitoring is scheduled to be conducted in each region.

NRM Region	Jan	Feb	March	April	May	June	July	Aug	Sept	Oct	Nov	Dec
Adelaide & Mount Lofty Ranges												
Northern Adelaide Plains Prescribed Wells Area												
Central Adelaide Plains Prescribed Wells Area												
Barossa Plains Prescribed Water Resources Area												
McLaren Vale Plains Prescribed Wells Area												
Western Mount Lofty Ranges Prescribed Water Resources Area												
Alinytjara Wilurara												
Non Prescribed Areas												
Eyre Peninsula												
Musgrave Prescribed Wells Area												
Southern Basins Prescribed Wells Area												
Non Prescribed Areas												
Kangaroo Island												
Non Prescribed Areas												
Northern & Yorke												
Clare Prescribed Water Resources Area												
Baroota Prescribed Water Resources Area												
Non Prescribed Areas												
South Australian Arid Lands												
Far North Prescribed Wells Area												
Non Prescribed Areas												
South Australian Murray Darling Basin												
Angas Bremer Prescribed Wells Area												
Eastern Mount Lofty Ranges Prescribed Water Resources Area												
Mallee Prescribed Wells Area												
Marne Saunders Prescribed Water Resources Area												
Peake Roby Sherlock Prescribed Wells Area												
Loxton												
Chowilla												
SARFIIP Pike and Katarapko												
Pike Murtho												
Berri Renmark												
Waikerie Moorook												
South East												
Padthaway Prescribed Wells Area												
Tatiara Prescribed Wells Area												
Tintinara Prescribed Wells Area												
Lower Limestone Coast Prescribed Wells Area												
Non Prescribed Areas												

Water Resource Monitoring Unit, Science Group, DEWNR. 2017

Notes:

DEWNR's water monitoring field operations are scheduled on an annual basis to enable water data to be recorded at the optimal time.

This ensures the data is relevant and useful to water scientists, water managers and water users across the state.

The monitoring schedule indicates when DEWNR's monitoring staff will be visiting sites throughout the state and across the year.

Outside of the site visit schedule, monitoring staff conduct a wide range of related activities including site maintenance, data processing and validation, and asset management activities.

Groundwater monitoring staff also support colleagues in delivering surface water monitoring during peak periods.

The schedule can help you identify when water monitoring staff will be in your area or region and can be used as a guide to when new data will be available via the website application [Groundwater Data](#).

During these times, you may see staff visiting water monitoring sites. If you do see us in the field, please stop and say hi, we'll be happy to chat about our monitoring work.

Field staff may also contact you directly regarding property access to enable some monitoring site locations to be visited.

Occasionally, the monitoring schedule will need to be modified as a result of seasonal climate variations and changing priorities.

Please follow @SADEWNR on Twitter for monitoring schedule updates and contact us directly on DEWNR.ResourceMonitoring@sa.gov.au if you have specific questions.
